

INDUSTRY SOLUTIONS

Interactive Entertainment

Terremark's Interactive Entertainment Group provides managed infrastructure solutions tailored to the unique requirements of entertainment applications including casual gaming, MMOGs, virtual worlds and social networking sites. These applications have unique requirements with regard to computing density and quantity and diversity of network connectivity, which Terremark is uniquely qualified to provide from its flagship NAP of the Americas facility in Miami, Florida and datacenters around the world.

Games developers and publishers leverage the industry's most robust and sophisticated operations platform including a global datacenter footprint, plug-and-play access to more than 160 global network carriers and Terremark's enterprise-class Infinistructure utility computing platform. Terremark provides a complete range of infrastructure services from colocation to managed hosting, and professional services including security services, disaster recovery design and planning, and application release management are also available.

World-Class Datacenters

With fortress-style facilities that sit on top of Tier 1 networks from more than 160 global network carriers, Terremark's

state-of-the-art Network Access Points are unrivaled. Our datacenters provide the highest physical and logical security for business-critical applications and n+2 redundant power and cooling backed by 100% SLAs.

Terremark's flagship datacenter, the 750,000 square foot NAP of the Americas® in Miami, Florida, is one of the largest and most connected datacenters in the world. The Tier-IV facility was the first purpose-built, carrier-neutral Network Access Point and brings together massive and diverse connectivity from more than 160 carriers.

Terremark Operations Platform at a Glance

Global footprint of top-tier datacenter facilities
Power-dense datacenter infrastructure
100% SLAs on power and environmentals
"Zero-mile" connectivity to more than 160 global network providers
Cross-connect directly to services and partners within the facility
Infinistructure™ Utility compute/network/storage platform
digitalOps® Command Center systems management portal
Full range of services available from colocation to managed hosting
Professional services help with infrastructure design and deployment

Colocation Services

Terremark's colocation services offer a highly secure and reliable carrier-neutral environment to deploy today's power, cooling and bandwidth-intensive applications. Terremark provides 100% Service Level Agreements for power and environmental systems through fully redundant subsystems, including power and fiber trunks from multiple sources. Our scalable solutions allow you to upgrade space, connectivity, power and services as your requirements evolve.

Freedom of Connectivity

Terremark provides companies with true freedom of connectivity, with plug-and-play access to more than 160 leading global carriers, providing a competitive marketplace of connectivity that lowers bandwidth costs while allowing customers to select the connectivity strategically best suited to their business, player demographics and bottom line.

With direct access to the 15 US fiber backbones and global networks worldwide, we connect your games directly to the heart of the Internet, delivering the scalable, burstable performance required for bandwidth-intensive games and virtual worlds.

Managed Hosting

Terremark is a pioneer in the managed hosting industry, with more than a decade of experience managing complex, transaction-intensive applications for companies around the world. Our Highly Managed Hosting™ service provides complete support for custom applications with service level agreements structured at the transaction level.

Terremark's industry-leading Infinistructure™ utility computing platform leverages the power of virtualization to provide an enterprise-class utility computing infrastructure that sets new standards for scalability and agility, allowing customers to precisely match their infrastructure requirements to their business needs.

Security Services

Terremark offers a full line of managed and professional security services, including vulnerability assessments, penetration testing, incident response and customized services to help our clients identify, understand, and effectively deal with security issues before and after they occur.

About Terremark

Terremark Worldwide, Inc. (NASDAQ:TMRK) is a leading global provider of IT infrastructure services delivered on the industry's most robust and advanced operations platform. Leveraging data centers in the United States, Europe and Latin America and access to massive and diverse network connectivity, Terremark delivers enterprise, government and interactive entertainment customers a comprehensive suite of managed solutions including hosting, colocation, connectivity and security services.

Terremark's acclaimed Infinistructure™ utility computing architecture has redefined industry standards for scalable and flexible computing infrastructure and its DigitalOps® service platform combines end-to-end systems management workflow with a comprehensive customer portal.

"Our relationship with Terremark is an integral part of our strategy to deliver a unique online gaming experience to our users while providing top-quality service."
